

Trust & Safety System v1

Content policy · Detection · Moderation · Appeals · Fraud · Compliance

Yeh Phase 0 hai, Phase 1 nahi. Ek policy strike se app store se remove ho sakte ho.

Kyun yeh sabse bada risk hai

Chamet ke 26 million Indian downloads aur \$38M lifetime spending the — phir bhi Google ne use August 2023 mein UGC policy violation par Play Store se hata diya. Tango aur Bigo bhi globally pull hue the.

Revenue, competition, funding — in sabse bada existential risk yahi hai.

1. Content policy — pehle likho, phir build karo

Level	Kya	Action	Kaun decide kare
L1 — Zero tolerance	CSAM, minor involvement, real violence, terrorism	Instant permanent ban + law enforcement report + evidence preserve	Auto + T&S lead review
L2 — Severe	Nudity, sexual acts, drugs, self-harm	Stream instant kill, 7-30 din suspend, repeat = permanent	Moderator, T&S lead confirm
L3 — Moderate	Suggestive content, abuse, harassment, spam	Warning → mute → 24hr suspend	Moderator
L4 — Minor	Off-topic, quality, mild rule breaking	Warning, room admin handle kare	Room admin / auto

L1 special rules:

- Account permanent ban
 - Device + payment method blacklist
 - Evidence **90 din preserve** — delete nahi karna, law enforcement request aa sakti hai
 - T&S lead ko turant escalate, koi wait nahi
-

2. Detection pipeline

Teen layers, alag speed par:

Layer	Kya check karta hai	Latency	Cost
Video frame sampling	Har 3-5 sec ek frame → NSFW model	~2 sec	Sabse mehnga
Audio transcription	30-sec chunks → keyword + intent	~10 sec	Medium
Text filter	Chat, room title, bio, username	Instant	Sasta
Behavioural signals	Report rate, viewer drop, gift spike	Real-time	Sasta

Tuning

- **Trust-based sampling:** naye/unverified hosts har 1 second, trusted hosts har 10 second. Cost ~60% bachta hai
- **Confidence routing:** >0.9 auto-kill · 0.6-0.9 human queue · <0.6 log only
- **Hindi/Hinglish transliteration** handle karna zaroori hai — English wordlist bekaar hai

Vendors

AWS Rekognition · Hive · Sightengine

Hive is category ke liye behtar hai — live streaming par specifically trained.

3. Moderator workflow

Screen layout: ek moderator 9-12 rooms grid mein dekhe, ML-flagged rooms auto-highlight.

Queue priority

1. L1 auto-flags (instant)
2. Multiple user reports on same stream
3. High-gift streams (violation ka impact zyada)
4. Naye hosts ka pehla stream
5. Random spot checks

One-click actions

Kill stream · Mute host · Suspend · Escalate to T&S lead · Mark false positive

SLA targets

Type	Response time
L1 auto-flag	< 30 seconds
L2 report	< 2 minutes
L3 report	< 15 minutes
L4 report	< 4 hours

Staffing math

Ek moderator ek shift mein comfortably **10-12 concurrent streams**.

Concurrent streams	Moderators per shift	24×7 total (3 shifts + off)
100	9	30+
250	22	70+

Launch stage: 16-18 ghante coverage (10 AM – 4 AM), kyunki peak 8 PM – 2 AM hota hai. Baaki hours mein auto-kill threshold aggressive rakho aur concurrent streaming limit lagao.

4. Appeals

Yeh sirf fairness ke liye nahi — **App Store review ke liye zaroori hai**. Apple aur Google dono poochte hain ki users apni baat kaise rakh sakte hain.

- In-app appeal form, ban message ke saath visible
- 48 ghante mein response
- Original moderator se **alag banda** review kare
- Result + reason log ho
- L1 par appeal allowed hai, par overturn extremely rare — aur documented ho

5. Special protections

Minors — sabse bada risk

- Payout se pehle **PAN + face match** mandatory (PAN 18+ ka proxy bhi hai)
- Age-estimation model live streams par; under-18 lagne par human review
- Minor confirm hone par: instant ban, earnings freeze, exploitation ka shak ho toh report

- Yahan false positive better hai false negative se. Hesitate mat karo.

Grooming aur exploitation patterns

- Adult host + repeatedly young-sounding viewer → flag
- Off-platform contact requests (WhatsApp number share) → auto-flag via chat filter
- Private call requests naye accounts se → rate limit

Financial harm

- ₹50,000/month cross karne par cooling-off prompt
- User apni daily/monthly limit khud set kar sake
- Self-exclusion option (30 din / 90 din / permanent)
- Sudden spend spike → soft check ("kya yeh aap hi hain?")

Yeh chargebacks kam karta hai **aur** regulator ke saamne aapka sabse accha argument banta hai.

6. Fraud detection

Paisa aur safety yahan judte hain, isliye T&S ka hissa hai:

Pattern	Signal
Gift-back collusion	Do accounts ke beech circular gifting
Stolen card	Naya account → bada recharge → turant gift → turant withdraw
Coin laundering	Reseller se coins → ek host ko → withdraw
Agency farming	Agency ke hosts sirf agency ke users se gift le rahe hain
Fake engagement	Viewer count spike bina chat ke

Controls: hold period (7-14 din) · velocity limits naye accounts par · device fingerprinting · payout se pehle risk score check

7. Legal compliance layer

Item	Requirement
Grievance Officer	India-resident. Naam, email, address publicly published. IT Rules 2021
Response SLA	24 ghante mein acknowledge, 15 din mein resolve
Takedown	Court/government order par 36 ghante
Data preservation	180 din, investigation ke liye
Monthly compliance report	Complaints received, actions taken
Transparency report	Quarterly, publicly published

8. Metrics

Metric	Target
Moderation actions per 1,000 live hours	Track karo, baseline banao
L1 detection → action	< 30 sec
False positive rate	< 5%
Report SLA compliance	> 95%
Repeat violation rate	< 10%
Appeal overturn rate	10-20%

Appeal overturn rate padhna: bahut kam (<5%) = over-enforcement ya sham appeals process. Bahut zyada (>30%) = poor moderator training.

9. Cost

Launch stage

Item	Monthly
ML detection (~10K concurrent hours)	₹80,000 - 1,50,000
4 moderators	₹1,00,000
T&S lead (part-time)	₹60,000
Total	₹2.4 - 3.1L

Scale (100K DAU)

Item	Monthly
25-30 moderators	₹7 - 8L
ML detection	₹4 - 5L
T&S lead + 2 seniors	₹2L
Total	₹13 - 15L

10. Build checklist — Phase 0

- ☐ Content policy document (4 levels), lawyer-reviewed
- ☐ Community guidelines, user-facing
- ☐ Report flow (user, room, message, profile)
- ☐ Block
- ☐ 18+ age gate at signup
- ☐ ML detection integrated (video + text minimum; audio Phase 1)
- ☐ Moderator dashboard — grid view, one-click actions
- ☐ Enforcement action log (who, what, when, why)
- ☐ Appeal form + workflow
- ☐ Grievance Officer appointed, contact published
- ☐ Evidence preservation storage (separate, restricted access)
- ☐ Spend limit + self-exclusion (Phase 1 acceptable)
